# WEEK 5

## Aim:

To enhance the Week 4 webpage using JavaScript and to perform JavaScript form validation along with basic Node.js and NPM operations.

## Description:

This experiment consists of two parts. In the first part, the Week 4 login dashboard is enhanced with a JavaScript setTimeout() callback function to redirect the user to the login page after 10 seconds of inactivity. In the second part, JavaScript-based HTML form validation is performed, followed by exploring Node.js installation, REPL, and NPM operations.

## Part 1: Enhancement of Week 4 Experiment

Implement a 10-second inactivity timer using JavaScript.

## Program Code:

1) Success page modified :

```
<html>
    <head>
        <title>Success-Page</title>
                <meta name="viewport" content="width=device-width">
        <meta charset="UTF-8">
        <style>

            body{
                background-color: aliceblue;
                background-image: url("./bgimage.jpg");
            }
            .heading{
                height: 180px;
                display: flex;
               align-items: center;

            }
            .heading img{
                height: 100px;
                width: 100px;
```

```
        margin-left: 20px;

    }
.text{
    flex:1;
     display: flex;
    align-items: center;
   justify-content: center;
    flex-direction: column;
    color: azure;

}
.navbar{
    margin-top: 0px;
    height: 50px;
    display: flex;
    flex-direction: row;
   justify-content: space-around;
background-color: purple; }
a{
    color: white;
    text-decoration: none;
    margin-top: 10px;
}
.box{
    margin-top: 50px;
    height:500px;
    width: 600px;
    margin-left: auto;
    margin-right: auto;
    background-color: lightblue; box-shadow:
    10px 10px 10px grey; display: flex;
    flex-direction: column;
   justify-content: space-around; }
.inner{
    background-color: aliceblue;
    border-left: 5px solid yellow;
    margin-left: auto;
    margin-right: auto;
    width: 90%;
    align-self: center;
```

```
        }
        li{
            margin-left: auto;
          margin-right: auto;
           color: blue;
           margin-left: 8px;
        }
        #greeting{
              color: blue;
              margin-left: 10px;
        }
        #loginTime{
              color: blue;
              margin-left: 10px;
        }
         .fl{
           background-color: purple;
           height: 50px;
           display: flex;
           align-items: center;
          justify-content: center;
           margin-top: 50px;
         }
         .fl p{
         color: white;

         }
    </style>
</head>
<header>
    <div class="heading">
        <img src="Logo.jpeg" alt="Logo">
        <div class="text">
        <h1>Anil Neerukonda Institute of Technology & Sciences</h1> <h2>Campus
        Placement Portal</h2>
        </div>
    </div>

Notice</h2>
                <ul>
                    <li>Please contact the <b>Training & Placement Office</b> regularly for
updates.</li>
                    <li>Stay informed about the latest <b>MAANG Companies Recruitment
Process.</b></li>
                    <li>Check your registered Email ID and Placement Portal for
Announcements.</li>
                                        <li>Attend all Pre-Placement Talks (PPTs),Aptitutde
Training,Mock Interviews and Campus Drives</li>
                    <li>Keep your Resume,Academic Documents, and ID Card ready before
every Recruitment process.</li>
                </ul>
            </div>
        </div>
        <footer class="f1">
                            <p>&copy 2026 ANITS | Department of Training and
Placement</p>

        </footer>
        <script>
                function timer(){

                 alert("Login time-out");
                        window.location.href="login-dashboard.html";
            }

            let timeOutId=setTimeout(timer,10000);
            function resetTime(){
```

```
                clearTimeout(timeOutId);
                 timeOutId=setTimeout(timer,10000);
            }
            document.addEventListener("click",resetTime);
                            document.addEventListener("mouseover",resetTime);
            document.addEventListener("keyup",resetTime);
                    document.addEventListener("keydown",resetTime);
            document.addEventListener("input",resetTime);
            document.addEventListener("submit",resetTime);
            let now=new Date();
            let hours=now.getHours();
            let greet="";
            if(hours<12){
                greet="Good Morning!";
            }
            else if(hours<17){
                greet="Good Afternoon!";
            }
            else if(hours<21){
                greet="Good Evening!";
            }
            else{
                greet="Good Night!"
            }
            document.getElementById("greeting").innerHTML=greet;
        document.getElementById("loginTime").innerHTML="Login Time
        :"+now.toLocaleTimeString();

            </script>
        </body>
        </html>
```

Output:

Part 2: JavaScript Form Validation and Node.js Basics 2.1

JavaScript-based HTML Form Validation.

Program Code:

```
<html>

<head><title> form validation</title>

</head>
```

```
<body>
<form onsubmit="return validateForm()">

    <label>Name:</label>
    <input type="text" id="name">

    <br><br>

    <label>Email:</label>
    <input type="email" id="email">

    <br><br>

    <button type="submit">Submit</button> </form>

<p id="error"></p>

<script>
function validateForm() {

    let name = document.getElementById("name").value.trim(); let email =
    document.getElementById("email").value.trim();  let  error  =
    document.getElementById("error");

    error.innerHTML = "";

    if (name === "") {
        error.innerHTML = "Name is required";
```

```
        return false;
    }

    if (email === "") {
        error.innerHTML = "Email is required";
        return false;
    }

    alert("Form submitted successfully");
    return true;
}
</script>
</body>
</html>
```

Output:

2.2 Node.js installation and verification, Node.js REPL practice, NPM – creation of package.json and installation of Express.

Details About Program:

Saved in: Week 5 folder of the repository.

Technologies used: HTML, CSS, JavaScript and Node.js.

Part 1 Execution: The enhanced HTML page is opened in a web browser.

Part 2 Execution: Form validation is executed in a web browser, while Node.js and NPM programs/commands are executed using the terminal or Command Prompt.

Working: Part 1 implements automatic redirection after 10 seconds of inactivity. Part 2 validates HTML form inputs and explores Node.js, REPL and NPM operations.

Result:

The Week 4 webpage was successfully enhanced with a 10-second inactivity timer. JavaScript form validation was performed, and Node.js, REPL and NPM operations were successfully explored.
